Multicoat's templates are made from multi-layered paper topped with a wax coating on the face to resist moisture penetration of the coating being applied over the top. Our adhesive is applied in sheet form to the template prior to cutting so that 100% of the sheet has adhesive. The adhesive has a good temporary bond to the substrate and highly resists the transfer of adhesive from the template to the substrate. The thickness of the templates is approximately .05" and once stucco is applied over the top, the visual depth of the joint is greatly increased to close to 1/4" or greater. Templates are furnished in flat sheets of assorted sizes designed to be placed by one worker.
